

M&G Corporate Bond Fund

a sub-fund of M&G Investment Funds (3)

Annual Short Report June 2019

For the year ended 30 June 2019

The Authorised Corporate Director (ACD) of M&G Investment Funds (3) presents its Annual Short Report for M&G Corporate Bond Fund which contains a review of the fund's investment activities and investment performance during the period. The ACD's Annual Long Report and audited Financial Statements for M&G Investment Funds (3), incorporating all the sub-funds and a Glossary of terms is available free of charge either from our website at www.mandg.co.uk/reports or by calling M&G Customer Relations on 0800 390 390.

ACD

M&G Securities Limited,
10 Fenchurch Avenue, London EC3M 5AG

(Authorised and regulated by the Financial Conduct Authority. M&G Securities Limited is a member of the Investment Association and of the Tax Incentivised Savings Association.)

Important information

On 8 April 2019, M&G Corporate Bond Fund launched the Sterling Class 'PP' Accumulation shares.

As mentioned in the shareholder letter on 17 June 2019, we are making changes to the way we charge for M&G funds based in the UK, starting on Thursday 1 August 2019. The annual charge should be simpler to understand and easier to compare with other fund charges. We are combining all the charges that make up the current ongoing charge figure (OCF) into a single annual charge. Only exceptional items such as unforeseen legal and tax expenses, also known as extraordinary expenses, will be excluded from the annual charge. To find out the new annual charge and the OCF which are shown in the Key Investor Information Document (KIID) for the share class(es) you are invested in, visit our website www.mandg.co.uk.

On 28 September 2018, the Depositary changed from National Westminster Bank Plc to NatWest Trustee & Depositary Services Limited.

Investment objective

The fund aims to provide income and capital growth.

Investment policy

At least 70% of the fund is invested in sterling-denominated corporate debt instruments. The fund's exposure to corporate debt may be gained through the use of derivatives. Derivatives may also be used for efficient portfolio management. Any currency exposures within the fund may be managed by currency hedges into sterling. The fund may also invest in collective investment schemes, other transferable securities and other debt instruments (including corporate debt and government and public securities denominated in any currency), cash, near cash, other money market securities, warrants and other derivative instruments.

Investment approach

The fund's strategy is based on the principle that corporate bond market returns are driven by a combination of macroeconomic, asset, sector and stock-level factors. As different factors dominate returns at different stages of the economic cycle, the manager applies a dynamic investment approach, changing the blend of duration and credit exposure in the portfolio to weight them appropriately.

The fund manager has the investment freedom to take a high-conviction approach when selecting credits for the portfolio. Diversification – across individual issuers as well as industries – is an essential element of the fund's strategy to limit the potential for losses in the event of default.

The fund's investment style combines top-down and bottom-up analysis, and the fund manager is assisted in the selection of individual credits by a large team of independent sovereign and public credit analysts.

Risk profile

The fund invests mainly in sterling-denominated fixed income securities, or bonds, issued by UK companies. It is primarily subject to the price volatility of the UK bond market as well as the performance of individual issuers. It is also influenced by developments in the broader global bond market. In addition, the fund is subject to fluctuations in currency exchange rates.

The fund's focus is on high-quality corporate bonds, securities that are normally traded with relative ease. Up to 20% of the fund may be invested in other fixed income investments, such as government bonds, which are typically highly liquid assets, or high yield corporate bonds, which are higher risk assets that could potentially experience a degree of illiquidity in times of market distress.

The fund's exposure to debt securities may be gained through the use of derivatives. In association with the use of derivatives, including those instruments not traded through an exchange, collateral is deposited, in order to mitigate the risk that a counterparty may default on its obligations or become insolvent.

Portfolio diversification is key in managing liquidity and default risks as well as reducing market risk. The fund's risks are measured and managed as an integral part of the investment process.

Please note that the risk management policies are set out in full in the financial statements and notes sections of the Annual Long Report and audited Financial Statements of M&G Investment Funds (3).

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

As at 1 July 2019, for the year ended 30 June 2019

Performance against objective

Between 2 July 2018 (the start of the review period) and 1 July 2019, the M&G Corporate Bond Fund delivered a positive total return (the combination of income and growth of capital) across all of its share classes.*

The M&G Corporate Bond Fund invests predominantly in high-quality, sterling-denominated corporate bonds, with the aim of providing income and capital growth.

Bonds are loans that are extended by an investor to an issuing entity – such as a company or government – in exchange for regular interest payments. The initial amount borrowed by the entity is usually repaid at the end of the loan's life. Bonds issued by companies are referred to as 'corporate bonds', while those issued by governments are called 'government bonds'. Investment grade corporate bonds refer to debt securities issued by a company with a medium or high credit rating from a recognised credit rating agency. They are considered to be at lower risk of non-repayment than those issued by companies with lower credit ratings (known as high yield bonds). The performance of investment grade corporate bond markets can be influenced by the performance of government bonds.

* For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Fund performance' section of the Annual Long Report and audited Financial Statements for M&G Investment Funds (3).

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period for Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares. Calculated on a price to price basis with income reinvested.

Long-term performance				
	One year 02.07.18 % ^[a]	Three years 01.07.16 % p.a.	Five years 01.07.14 % p.a.	Since launch % p.a.
Sterling ^[b]				
Class 'A'	+5.8	+3.3	+4.4	+6.1 ^[c]
Class 'I'	+6.3	+3.8	+4.8	+6.6 ^[d]

^[a] Absolute basis.

^[b] Price to price with income reinvested.

^[c] 15 April 1994. All performance data prior to 11 March 2002 (the launch date of the share class) has been calculated by reference to a conversion factor due to a change of the nominated share class.

^[d] 2 July 2007, the launch date of the share class.

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

Investment performance

Volatility returned to financial markets in 2018 as a result of a range of factors that included higher interest rates and inflation, political uncertainty and global trade tensions.

The US Federal Reserve (Fed) raised interest rates in September and December, making it a total of nine times US rates have risen since the great financial crisis about a decade ago. In the UK, much uncertainty remained about the eventual terms of the country's Brexit deal with the European Union (EU). This contributed to times of adverse sentiment towards UK bonds. Investors in Europe became concerned in the latter stages of 2018 about Italian proposals to increase the country's budget deficit. The plans, which met with opposition from the EU, were drafted after an anti-establishment party gained a strong presence in Italy's new coalition government.

Sentiment towards corporate bonds – and international stockmarkets – was increasingly affected by concerns of a trade war developing between the US and China. In addition, during the latter months of

2018, global economic growth forecasts began to moderate, which contributed to weaker confidence in the outlook for corporate bonds and emerging markets.

Sentiment then changed once again in early 2019, as investors took comfort from statements by the Fed that it would moderate its strategy around raising interest rates. Indeed, investors' mood changed so dramatically that markets now expect the next move by the Fed will be to cut, rather than raise, interest rates. However, the more optimistic mood was somewhat dampened in May, as renewed fears about the prospects for global trade, caused mainly by heightened tensions between the US and China over tariffs, caused investors to prefer safer assets once again.

While the second half of 2018 was challenging for corporate bonds, the strong start to 2019 helped them to deliver positive returns across the 12-month period as a whole. Corporate bonds denominated in US dollars generally outperformed those denominated in sterling and euros.

The biggest contribution to the fund's performance came from its holdings in corporate bonds issued by non-financial companies, while those issued by banks also contributed strongly. We have positioned the fund to be slightly less sensitive to changes in interest rates than many of its peers, and this acted as a slight lag on performance. The fund's exposure to asset-backed securities (ABS) also helped. ABS are bonds backed by assets including credit card receivables, car loans or mortgages, whose creditworthiness is based on the underlying assets, rather than on the company that issued the bonds. Most ABS holdings are floating-rate in nature and stand to benefit if interest rates rise as they have variable rate coupons.

Investment activities

One of the key drivers of a bond fund's performance is its ability to adjust the portfolio's sensitivity to changes in interest rates, known as 'duration'. Being shorter duration means that a fund is relatively less sensitive to changes in interest rates than longer duration funds. During the course of the reporting period, we held the fund's duration close to its maximum permitted short position versus the iBoxx £ Corporate Index.

We once again took advantage of opportunities to add value through relative value trades – for example, taking advantage of the difference in pricing between bonds from the same company issued in different currencies or different maturities. In the reporting period, the majority

of these involved switching from an issuer's US dollar-denominated debt into its sterling debt, to harness the more attractive pricing. We were particularly active as relative value traders within the financials and telecoms sectors.

After a significant sell-off in corporate bond markets towards the end of 2018 caused prices to fall, we added some credit risk back into the portfolio. In December, we sold some good quality names that had performed well, for example Goldman Sachs and Apple, in order to buy into selected good value credits such as Sky and WPP Group. Towards the end of the reporting period, we began to reduce credit risk once again following strong performance: we sold bonds from a number of telecoms companies, eg Verizon, Vodafone and AT&T, and from some banks, for example HSBC and Goldman Sachs.

We continue to think that UK government bonds (also known as gilts) look expensive, and so we have little exposure to these assets.

Outlook

After a difficult 2018 for financial markets, the first half of 2019 has been largely constructive for global bond markets, with a return of risk appetite, as investors have been encouraged by signs that the US Federal Reserve would pause its interest rate rising cycle. However, we have long been of the view that the Fed will need to raise rates further, which is reflected in the fund's positioning. (On 31 July, subsequent to the end of the review period, the Fed announced that it would cut interest rates by 0.25%.)

We remain broadly positive on the outlook for the global economy and corporate bonds, and do not believe that recession is imminent. While we have been partially reducing risk in the portfolio in the latter stages of the reporting period, we continue to find opportunities within corporate bond markets.

Regardless of how these situations develop, what we do as fund managers does not change. We look at where we are in the interest rate cycle and the economic cycle, and we look at where we can find the most attractive opportunities for the fund from different sectors and individual issuers at any given stage.

Forward currency contracts	(0.32)	(0.36)
CASH EQUIVALENTS		
'AAA' rated money market funds ^[a]	4.56	2.14

^[a] Uncommitted surplus cash is placed into 'AAA' rated money market funds with the aim of reducing counterparty risk.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

The following chart and tables show the performance for two of the fund's share classes – Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

We show performance for these two share classes because:

- The performance of the Sterling Class 'A' (Accumulation) share is what most individuals investing directly with M&G have received. It has the highest ongoing charge of all the sterling share classes. Performance is shown after deduction of this charge. All UK investors in the fund therefore received this performance or better.
- The performance of the Sterling Class 'I' (Accumulation) share is the most appropriate to compare with the average performance of the fund's comparative sector. It is the share class used by the Investment Association in the calculation of the comparative sector's average performance. This share class is available for direct investment with M&G subject to minimum investment criteria, or via third parties who may charge additional fees. The performance shown takes the deduction of the ongoing charge for this share class into account but it does not take account of charges applied by any other party through which you may have invested.

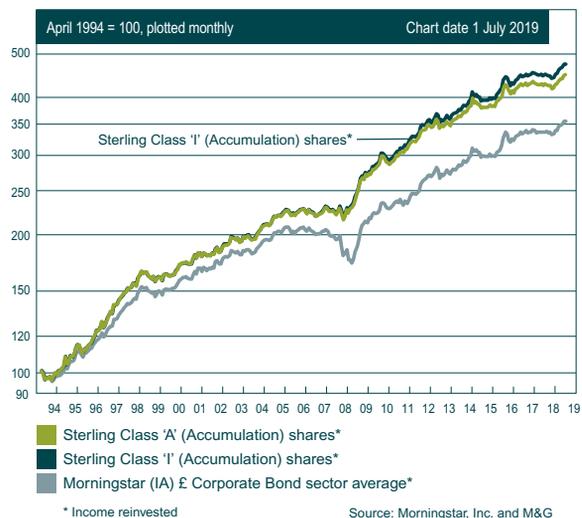

The fund is available for investment in different share classes, each with varying levels of charges and minimum investments; please refer to the Prospectus for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations. For the specific performance tables of all share classes, please refer to the Annual Long Report and audited Financial Statements for M&G Investment Funds (3), which is available free of charge either from our website at www.mandg.co.uk/reports or by calling M&G Customer Relations.

Fund level performance

Fund net asset value			
	2019	2018	2017
as at 30 June	£'000	£'000	£'000
Fund net asset value (NAV)	3,505,536	3,696,143	4,127,165

Performance since launch

To give an indication of how the fund has performed since launch, the chart below shows total return of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

The fund's Sterling Class 'I' (Accumulation) shares were launched on 2 July 2007. Performance data shown prior to this date is that of the fund's Sterling Class 'A' (Accumulation) shares.

Financial highlights

Fund performance

To give an indication of how the fund has performed during the period the tables below show the performance of Sterling Class 'A' (Accumulation) shares and Sterling Class 'I' (Accumulation) shares.

All 'Performance and charges' percentages represent an annual rate except for the 'Return after operating charges' which is calculated as a percentage of the opening net asset value per share (NAV). 'Dilution adjustments' are only in respect of direct portfolio transaction costs.

Financial highlights

Operating charges and portfolio transaction costs

We explain below the payments made to meet the ongoing costs of investing and managing the fund, comprising operating charges and portfolio transaction costs.

Operating charges

Operating charges include payments made to M&G and to providers independent of M&G:

- **Investment management:** Charge paid to M&G for investment management of the fund (also known as Annual Management Charge).
- **Administration:** Charge paid to M&G for administration services in addition to investment management – any surplus from this charge will be retained by M&G.
- **Oversight and other independent services:** Charges paid to providers independent of M&G for services which include depositary, custody and audit.
- **Ongoing charges from underlying funds:** Ongoing charges on holdings in underlying funds that are not rebated.

Operating charges do not include portfolio transaction costs or any entry and exit charges (also known as initial and redemption charges). The charging structures of share classes may differ, and therefore the operating charges may differ.

Operating charges are the same as the ongoing charges shown in the Key Investor Information Document, other than where an estimate has been used for the ongoing charge because a material change has made the operating charges unreliable as an estimate of future charges.

For this fund there is no difference between operating charges and ongoing charges figures, unless disclosed under the specific share class performance table.

Portfolio transaction costs

Portfolio transaction costs are incurred by funds when buying and selling investments. These costs vary depending on the types of investment, their market capitalisation, country of exchange and method of execution. They are made up of direct and indirect portfolio transaction costs:

- **Direct portfolio transaction costs:** Broker execution commission and taxes.
- **Indirect portfolio transaction costs:** 'Dealing spread' – the difference between the buying and selling prices of the fund's investments; some types of investment, such as fixed interest securities, have no direct transaction costs and only the dealing spread is paid.

Investments are bought or sold by a fund when changes are made to the investment portfolio and in response to net flows of money into or out of the fund from investors buying and selling shares in the fund.

To protect existing investors, portfolio transaction costs incurred as a result of investors buying and selling shares in the fund are recovered from those investors through a 'dilution adjustment' to the price they pay or receive. As the fund invests mainly in fixed interest securities, the direct transaction costs paid on other investments are too small to be reflected in the table below. To give an indication of the indirect portfolio dealing costs the table below shows the average portfolio dealing spread.

Further information on this process is in the Prospectus, which is available free of charge on request either from our website at www.mandg.co.uk/prospectuses or by calling M&G Customer Relations.

Portfolio transaction costs				
as at 30 June	2019	2018	2017	Average ^[a]
Indirect portfolio transaction costs	%	%	%	%
Average portfolio dealing spread	0.80	0.72	0.70	0.74
