

Euro Class A-H

Summary

- Local and hard currency emerging market bonds delivered gains in April.
- In a quiet month for transaction activity, the fund participated in a new issue of bonds from the government of Saudi Arabia.
- Fund Manager Claudia Calich maintained the portfolio's exposure to the US dollar at around 70 %.

Performance since launch

Fund performance

	1 month (%)	3 months (%)	YTD (%)	1 year (%)	3 years (%) p.a.	5 years (%) p.a.	Since tenure (%) p.a.	Since inception (%) p.a.
Fund	+1,4	+4,4	+6,0	+8,3	N/A	N/A	+3,9	+3,9
Index	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Sector	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Annual performance (%)

Past performance is not a guide to future performance.

The value of investments and the income from them will fluctuate. This will cause the fund price to fall as well as rise. There is no guarantee the fund objective will be achieved and you may not get back the original amount you invested.

The fund allows for the extensive use of derivatives.

Key information

Fund manager	Claudia Calich
Fund manager tenure from	2 December 2013
Deputy fund manager	Charles De Quinsonas
Launch date	15 October 1999
Launch of share class	10 November 2014
Fund size (millions)	€527,53
Number of issuers	90
Distribution yield (Acc)	4,67 %
Distribution yield (Inc)	6,07 %
Underlying yield (Acc)	4,67 %
Underlying yield (Inc)	4,68 %
Yield to expected maturity*	6,12 %
Modified duration (years)	6,1
Spread duration (years)	4,77
Average maturity (years)	10,14
Average coupon	6,64
Average credit rating	BB+
Share type	Acc & Inc
Ongoing charge	1,46 %

The distribution yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the share price, as at the date shown. It is based on a snapshot of the portfolio on that day. It does not include any preliminary charge and investors may be subject to tax on distributions. It is the fund's policy to offset certain charges against income for accumulation share classes and to offset certain charges against capital for income share classes. These charges include the annual management charge, administration fee and share class hedging fee (where applicable). As a result, yield figures for income and accumulation share classes may differ significantly. The underlying yield reflects the annualised income net of expenses of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market price of the fund as at the date shown. It is based on a snapshot of the portfolio on that day. It does not include any preliminary charge and investors may be subject to tax on distributions. For the fund's income share classes, the distribution yield is higher than the underlying yield only because a portion of the fund's expenses are charged to capital. This has the effect of increasing distribution(s) for the year and constraining the fund's capital performance to an equivalent extent.

*The yield to expected maturity is calculated in the valuation currency of the fund and is gross of fund expenses (including hedging differences). A fund may hold callable bonds whose yields are calculated on the basis of expected maturity.

Asset breakdown (%)

	Physical	CDS short	CDS long	Net
Government bonds - local currency	26,7	0,0	0,0	26,7
Government bonds - hard currency	46,6	0,0	0,0	46,6
Credit - local currency	2,1	0,0	0,0	2,1
Credit - hard currency	23,3	0,0	0,0	23,3
Cash	1,3	0,0	0,0	1,3

CDS short: bought protection (short credit exposure); CDS long: sold protection (long credit exposure)

The columns may not always add up when reading across as physical bond holdings and/or cash are sometimes used as collateral for CDS exposure.

Credit rating breakdown (%)

C	0,0	0,0	0,0	0,0
D	0,0	0,0	0,0	0,0
No rating	5,1	0,0	0,0	5,1
Cash	1,3	0,0	0,0	1,3

CDS short: bought protection (short credit exposure); CDS long: sold protection (long credit exposure)

The columns may not always add up when reading across as physical bond holdings and/or cash are sometimes used as collateral for CDS exposure.

Where a security has not been rated by Standard & Poor's, Fitch or Moody's, we may use M&G's internal credit rating. Based on a comparison of all available ratings for each security, the most conservative rating (S&P, Fitch, Moody's or M&G's internal rating) is taken into consideration. The ratings so identified are then expressed or converted into M&G's ratings format to obtain uniform information for all securities in the portfolio.

Performance review

Emerging market bonds delivered gains in April, with returns that were closely aligned among local and hard currency issues. During the month, much attention among global investors was focused on the unpredictable outcome of the French presidential election, as well as weakness in the performance of the US dollar. While anticipation of the French vote initially contributed to risk aversion, financial markets generally found relief later in the month as a pro-European Union (EU) candidate emerged as the first-round leader in the contest. Risk assets generally rallied as a consequence, although the final result of the election remained undecided until the second round of voting in early May. (Emmanuel Macron, the pro-EU and centrist candidate, was confirmed as the winner on 7 May).

In the emerging bond markets, hard currency-denominated government debt registered slightly better returns than their local currency and corporate bond counterparts. The JP Morgan Emerging Markets Bond (EMBI) Global Diversified Index, which measures hard currency-denominated government bonds, increased by 1.3%. As represented by the JP Morgan GBI-EM Global Diversified Index, local currency emerging market government bonds gained 1.2%, while emerging market corporate credit, as tracked by the JP Morgan Corporate EMBI (CEMBI) Broad Diversified Index, returned 1.1%. All returns are stated in US dollar terms.

While the fund's performance was helped by its globally diversified exposure to emerging market bonds in this environment, the depreciation of the US dollar against the euro detracted from its returns as a sizeable allocation to the US dollar was maintained within our currency positioning.

Key changes

In a quiet month for transaction activity in the fund, Claudia's purchases included a newly issued sukuk (Islamic bond) from the government of Saudi Arabia that she assessed was attractively priced. Elsewhere, some corporate exposure was added in South Africa, which reduced the fund's

underweight allocation to the country. The move reflected Claudia's view that some value could be found in the market after its recent downgrade to high yield status.

The fund's key investment themes remained broadly unchanged in April. In recent months, these themes have included increasing the fund's exposure to local currency-denominated sovereign bonds and this allocation remained around 27%. At this level, the fund's local currency allocation stands at a historically high weighting for the portfolio, while remaining below a neutral position.

In Claudia's view, the appeal of this area of the market has been helped by factors such as softer performance from the US dollar, divergent central bank paths and the attractiveness of local yield curves. In the year-to-date period, emerging market currencies that have performed notably well against the US dollar include the Mexican peso, Korean won, South African rand, and Brazilian real.

Within the fund's overall currency positioning, its allocation to the US dollar amounted to around 70% at the end of April, while its largest local currency exposures included to the Israeli shekel, Indian rupee, and Indonesian rupiah. In terms of the fund's duration, Claudia has recently maintained a broadly unchanged level, which stood at 6.1 years at the end of the month.
