Annual performance (%)

Past performance is not a guide to future performance.

The value of investments and the income from them will fluctuate. This will cause the fund price to fall as well as rise. There is no guarantee the fund objective will be achieved and you may not get back the original amount you invested.

The fund invests mainly in company shares and is therefore likely to experience larger price fluctuations than funds that invest in bonds and/or cash.

Beta	0,94
Standard deviation (%)	11,38

These four risk measures are calculated using realised, rolling, three-year fund returns. **Beta:** Forecast sensitivity of portfolio returns to the comparative index. **Standard deviation:** Forecast absolute volatility of portfolio returns. **Forecast tracking error (active risk):** Forecast standard deviation of a portfolio's returns relative to its comparative index. **Active share:** Sum of overweight and underweight positions within the portfolio away from the comparative index, divided by two.
