For any past performance shown, please note that past performance is not a guide to future performance.

The value of investments and the income from them will rise and fall. This will cause the fund price, as well as any income paid by the fund, to fall as well as rise. There is no guarantee the fund will achieve its objective, and you may not get back the amount you originally invested.

Changes in currency exchange rates will affect the value of your investment.

Further risk factors that apply to the fund can be found in the fund's Key Investor Information Document (KIID).

Alpha: Portfolio return less comparative index return, annualised.

Information ratio: Risk-adjusted relative return, measured as the ratio of active return (difference between portfolio return and index return), divided by tracking error (standard deviation of active returns).

Sharpe ratio: Risk-adjusted absolute return, measured as the ratio of portfolio excess return (difference between mean portfolio return and the risk-free rate) divided by the standard deviation of portfolio returns.

Historic tracking error: Measure of the actual deviation of portfolio returns from comparative index returns. These four risk measures are calculated using realised, rolling, three-year fund returns. **Beta:** Forecast sensitivity of portfolio returns to the comparative index. **Standard deviation:** Forecast absolute volatility of portfolio returns. **Forecast tracking error (active risk):** Forecast standard deviation of a portfolio's returns relative to its comparative index. **Active share:** Sum of overweight and underweight positions within the portfolio away from the comparative index, divided by two.
