

M&G (Lux) Dynamic Allocation Fund Euro Class A – Accumulation shares

Quarterly Fund Review as at 31 December 2020

Fund manager(s) – Juan Nevado, Craig Moran
For investment professionals only

Highlights

- Despite an uncertain start, the final quarter of a highly eventful year delivered further strength for risk assets, with many equity markets finishing 2020 close to multi-year or all-time record highs.
- The fund produced a strongly positive return for the quarter, largely from its allocation to global equities.
- We initially added to the portfolio's equity weighting following temporary price weakness, before returning to a neutral stance as markets subsequently rose.

The main risks associated with this fund

For any past performance shown, please note that past performance is not a guide to future performance.

The value and income from the fund's assets will go down as well as up. This will cause the value of your investment to fall as well as rise. There is no guarantee that the fund will achieve its objective and you may get back less than you originally invested.

Investments in bonds are affected by interest rates, inflation and credit ratings. It is possible that bond issuers will not pay interest or return the capital. All of these events can reduce the value of bonds held by the fund.

The fund may use derivatives to profit from an expected rise or fall in the value of an asset. Should the asset's value vary in an unexpected way, the fund will incur a loss. The fund's use of derivatives may be extensive and exceed the value of its assets (leverage). This has the effect of magnifying the size of losses and gains, resulting in greater fluctuations in the value of the fund.

The fund is exposed to different currencies. Derivatives are used to minimise, but may not always eliminate, the impact of movements in currency exchange rates.

Investing in emerging markets involves a greater risk of loss as there may be difficulties in buying, selling, safekeeping or valuing investments in such countries.

Further risk factors that apply to the fund can be found in the fund's Key Investor Information Document (KIID).

Things you should know

The fund allows for the extensive use of derivatives.

Performance is stated in the share class currency, which may differ from your domestic currency. As a result, the return may rise or fall due to currency movements.

Despite an uncertain start, the final quarter of a highly eventful year delivered further strength for risk assets, with many equity markets finishing 2020 close to multi-year or all-time record highs.

Initially, a resurgence in the number of COVID-19 infections, which caused the re-imposition of restrictions on travel and social gatherings in various countries, weighed on equity markets, with investors upset by the likely negative impact on economic activity. However, the discovery of effective vaccines to protect against the disease was seen as a game changer, raising hopes that a return to more normal behaviour might be possible. Investors rushed to buy equities and many stockmarkets experienced record breaking rallies.

Other encouraging news during the quarter included a better-than-feared corporate results season, a seemingly definitive result in the US election, the agreement of a trade deal between the UK and the European Union and the eventual passage of a financial support plan in the US. All these combined to overcome another worrying rise in new infections, together with the consequent lockdowns, plus the discovery of new, more infectious, strains of the disease.

The surge in share prices in the quarter was led by European banks, emerging markets, the UK mid-cap index, Spain and Japan. Fixed income markets reflected the greater appetite for risk, with emerging market bonds and high yield credit outperforming investment grade corporate bonds and government debt. One of the few assets to decline over the period was US government bonds.

In the currency markets, the US dollar declined relative to most major currencies, with sterling and the euro being particularly strong. Most emerging currencies strengthened as well. Finally, hopes of economic recovery supported commodity prices, especially oil, though gold lagged.

The fund produced a strongly positive return for the quarter, largely from its allocation to global equities. The largest contributors to returns were Asia ex Japan and Europe, followed by the 'baskets' of mining and banking stocks, although all equity positions contributed.

Government bond holdings also added to gains overall, with a positive contribution coming from non-mainstream government bonds, particularly Mexico and South Africa, both of which saw yields fall during the quarter. However, the allocation to long-dated US government bonds detracted. Corporate bond holdings were positive, led by the allocation to BBB bonds; the allocation to emerging market bond and credit funds also contributed. The alternatives portion of the portfolio was another contributor to performance, with by far the largest share coming from the Unibail Rodamco holding. The convertibles holding also contributed. Currency movements were positive for performance.

Portfolio activity

At the beginning of the quarter, following price weakness that we believed was driven by market pessimism rather than a change to fundamentals, we added to the fund's equity exposure in Germany, the US and the UK, bringing total equity exposure to 55%. This change was in line with our wish to seek to take advantage of short-term volatility via tactical changes to the portfolio when the level of valuations and the yields available for the different asset classes make it appropriate. The US equity market is very liquid and global, and at times exhibits signs of myopia, making it a useful tactical addition to the portfolio at times when we see signs of episodic price action in global equities. Also in October, we made a small addition to the fund's alternatives holding as it offered an attractive valuation.

In November and December, following some very strong performance, we reversed some of the tactical equity additions made in September and October, reducing the total target equity weighting from 55% to 40%. We reduced the weighting to US, European and Asian country indices, and sector exposures to UK miners and US and UK banks. We also closed the small position in US technology. We remain broadly diversified geographically, while being tilted towards cyclical sectors that have lagged the recovery (banks, mining stocks and healthcare) as we believe that they offer attractive medium to long-term value. For similar reasons, we also reduced our allocations to emerging market government bonds and currencies.

In aggregate, the portfolio's equity positions remain more geographically diversified than the MSCI World Index. Consequently, we are generally less exposed than our peers to the US market and technology sectors.

We significantly increased our weighting to 30-year US Treasuries during the quarter. We continue to view these as a useful counterbalance, in risk terms, to our equity positions within the portfolio. We believe that a benign inflation environment and central banks' desire to anchor rates lower should help moderate further pressure on rates moving up.

In November, we also took the opportunity presented by US dollar weakness to open a 5% target position in the currency, having hedged our exposure for some time. This reintroduction is in line with our general reluctance to take bets on major currency pairs to avoid non-episodic currency movements becoming a dominant source of returns.

Outlook

As we enter 2021, we remain focused, as ever, on the relationship between current expectations, valuations and prices, as we aim to discern where we believe the market might be making a 'mistake'. We believe that this is especially likely where there is a strong consensus; in terms of the outlook for the year, we observe that most investors expect a 'cyclical' recovery in the second half of the year, fuelled by successful vaccine rollouts. A rotation into 'value' segments of the market, which are expected to benefit from a gradual re-opening of economies, is another common theme. It is also possible that, after a year spent grappling with the pandemic and its policy responses, markets may be more vulnerable to surprises from other sources. We are therefore mindful of the potential for surprise market outcomes, and remain positioned accordingly.

Clearly, the prospect of mass vaccination is very encouraging, although much uncertainty remains over the short term, especially the impact on the economy of the severe restrictions being imposed to combat the rising number of virus cases and new, more infectious, strains of the disease being identified.

Depending on the timing and efficiency of the immunisation strategy, which could eventually lead to a resolution of the pandemic crisis, we would hope to see a normalisation of corporate earnings in the next 12 to 18 months. If that were to happen, we might expect those companies and sectors that have lagged behind the price recovery since March, including banks, consumer services and 'value' stocks in general, to recover at least some of the ground lost. This is just the sort of price action we saw in the vaccine-induced 'risk on' rally in November.

ESG Standard Glossary

Additional ESG specifications: In the context of M&G, these are funds managed with an explicit ESG objective, outcome or in accordance with specific ESG criteria, and will have a number of minimum exclusions in place.

Engagement: Interaction with company management on various financial and non-financial, including ESG, issues. Engagement allows investors to better understand how a company is undertaking its operations and how it is interacting with its stakeholders, as well as advising on and influencing company behaviour and disclosures where appropriate.

ESG integration: Describes the explicit and systematic inclusion of Environmental, Social and Governance factors in investment analysis and investment decisions. It underpins a

responsible investment approach, and allows investors to better manage risk and generate sustainable, long-term returns.

Exclusions: The exclusion or restriction of investments based on the sector in which they operate, the products or services they provide or for other specific criteria, i.e. they are deemed to be in breach of the United Nations Global Compact principles on human rights, labour the environment and anti-corruption.

Voting: As the partial owners of a company, shareholders have the right to vote on resolutions put forward at a company's annual general meeting. These resolutions include the re-election of directors, executive remuneration and business strategy, among others, and may include resolutions put forward by shareholders.

Important information

On 16 March 2018, the M&G Dynamic Allocation Fund, a UK-authorised OEIC, which launched on 3 December 2009, merged into the M&G (Lux) Dynamic Allocation Fund, a Luxembourg-authorised SICAV, which launched on 16 January 2018. The SICAV is run by the same fund managers, applying the same investment strategy, as the UK-authorised OEIC.

The fund's neutral currency positioning is 100% in euros. Deviations from this figure, therefore, represent long/short exposure.

The M&G (Lux) Dynamic Allocation Fund is a sub-fund of M&G (Lux) Investment Funds 1.

Where a security has not been rated by Standard & Poor's, Fitch or Moody's, we may use M&G's internal credit rating. Based on a comparison of all available ratings for each security, the most conservative rating (S&P, Fitch, Moody's or M&G's internal rating) is taken into consideration. The ratings so identified are then expressed or converted into M&G's ratings format to obtain uniform information for all securities in the portfolio.
